

The assessment of the suitability of the proposed taxonomy was conducted with the involvement of five practitioners who are knowledgeable about regional development planning issues and Bappeda's work practices. The evaluation covered nine criteria: the relevance of aspect categories, the clarity of category definitions, the alignment of terminology with Bappeda practices, the comprehensiveness of issue coverage, the exclusivity of categories, the adequacy of the taxonomy, the conciseness of the structure, the ease of development, and applicability to ABSA. The assessment results, the level of consistency in the assessments, and specific feedback from the practitioners are presented in Table II.

TABEL II. SUMMARY OF VALIDATION RESULTS FROM 5 PRACTITIONERS

NO	EVALUATION CRITERIA	SCORE P1	SCORE P2	SCORE P3	SCORE P4	SCORE P5	AVERAGE	CONSISTENCY IN SCORING	DIFFERENCES/SPECIFIC FEEDBACK
1	RELEVANCE OF ASPECT CATEGORIES	5	5	4	5	5	4.80	All practitioners stated that the eight categories are relevant to issues of planning and evaluation of development in Bengkulu City	Practitioner 3 gave a score of 4 because they considered the categories generally relevant, but felt they could be refined to describe urban planning issues more specifically
2	CLARITY OF CATEGORY DEFINITIONS	5	5	4	5	4	4.60	All practitioners rated the category definitions as understandable and helpful in distinguishing topics of public opinion	Practitioners 1, 2, 4, and 5 emphasized the need to retain or add examples of terms/distinguishing features; Practitioner 3 suggested brief case examples for categories that might overlap
3	ALIGNMENT OF TERMINOLOGY WITH BAPPEDA PRACTICES	5	5	5	5	5	5.00	All practitioners agree that the terminology is consistent with regional planning terminology as well as the RTRW and RPJMD documents	There were no differences in scores; the emphasis of the comments differed regarding the ease of linking the classification results to regional development documents and affairs
4	COMPREHENSIVENESS OF ISSUE COVERAGE	5	5	5	5	5	5.00	All practitioners agreed that the eight categories covered key development issues, such as infrastructure, the environment, the economy, basic services, governance, and social issues	There were no differences in scores; each practitioner cited examples of different issues covered, such as roads, waste management, MSMEs, education, health, and public order
5	EXCLUSIVITY OF CATEGORIES	4	4	4	4	4	4.00	All practitioners agree that the boundaries between categories are quite clear, but cross-sectoral development	Practitioners 1, 2, 3, and 5 suggested guidelines for determining main categories based on the focus or core of the issue; Practitioner 4

								issues can lead to overlaps	added the use of main labels and supporting labels for multidimensional opinions
6	ADEQUACY OF THE TAXONOMY	5	5	4	5	5	4.80	All practitioners rated the taxonomy as sufficient or adequate for categorizing public opinions, aspirations, complaints, and information	Practitioner 3 gave a score of 4 and described the taxonomy as an initial framework that still needs further development
7	CONCISENESS OF THE STRUCTURE	5	5	5	5	5	5.00	All practitioners agree that the eight categories are concise, easy to use, and do not burden the classification process	There was no difference in scores; comments emphasized ease of operational implementation and classification speed
8	EASE OF EXPANSION	5	5	5	5	5	5.00	All practitioners stated that the taxonomy is flexible enough to be expanded through the addition of sub-aspects, subcategories, or new terms without changing the main categories	There was no difference in scores; Practitioner 4 specifically emphasized modular development in line with policy changes and research needs
9	APPLICABILITY TO ABSA	5	5	4	5	5	4.80	All practitioners agree that taxonomy can be used as a basis for grouping opinion aspects and ABSA annotations/classifications	Practitioner 3 gave a score of 4 and emphasized the need for consistent annotation guidelines; Practitioner 5 also underscored the importance of consistent guidelines to ensure uniform labeling
	OVERALL AVERAGE	4.89	4.89	4.44	4.89	4.78	4.80	The taxonomy is considered highly suitable as an initial framework for classifying aspects of public opinion regarding the development of Bengkulu City and as the basis for the ABSA scheme	Priority areas for improvement include the development of annotation guidelines, rules for determining primary categories, and examples of terms or cases that distinguish between categories

P1–P5 = Practitioner 1–Practitioner 5. Scores can be interpreted on a scale of 1–5, with values closer to 5 indicating a very high level of suitability or appropriateness
